Determination of this BAC-ens.fr)

Determination of this BAC-ens sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster BAC library was prepared by Kazutcoy Ososophila melanogaster BAC library was prepared by Kazutcoy Ososophila Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila Dhy provided by the BDGP From the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pland by the corder individual BAC clones, the entire library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CNS0072Q 932 bp DNA linear GSS 03-JUN-1999
Drosophila melanogaster genome survey sequence T7 end of BAC #
BACR14B09 of RPCI-98 library from Drosophila melanogaster (fruit
  pBluescript II SK- plasmids were excised from the lambda bage in the state of the plant of the plant of the page. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            125 SSCGCSCCCCSCCCCSCCCCSSCGCGSSGCGGSGCSSGCGCSGCGSCGGG 784

Anote="Vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhoI; This library, constructed by John Davies and Jeffrey McDermott, combines DNNs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in the ambient levels of CO2 and HS medium bubbled with 5% CO2. Poly mRNA was purified from each sample, pooled and CDNA synthesized. The CDNA was directionally cloned into lambda ZAP II (Stratagene) in the ECORI (5') and XhoI (3') sites.

Syngenta Arabidopsis Insertion Library (SAIL) lines are available through the Arabidopsis Biotogical Resource Center (ARKC).
Sequences represent a pool of amplified genomic regions and not single contiguous sequences.
Class: TDNA tagged.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BB651469 RIKEN full-length enriched, 0 day neonate cerebellum Mus musculus cDNA clone C230083H05 5', mRNA sequence.

Pan troglodytes DNA, clone: PTB-076K10.R, genomic survey sequence.
Email: cgapbs-remail.nih.gov
Tissue Procurement: Invitrogen
cDNA Library Preparation: Life Technologies, Inc.
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Agencourt Bioscience Corporation
Clone distribution: MGC clone distribution information can be
found through the I.M.A.G.E. Consortium/LLNL at:
http://image.llnl.gov
Plate: LLAM12714 row: k column: 11
High quality sequence state: 9
High quality sequence stop: 691.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  636 CGAGTGTTTGGGACTCTAAATCCCATTGTCCTCAGCTTAATTCTGGGTAGGTCACGCTGA 577

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Googgawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCG-98 and was constructed by partial BCORI diseation of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's pl and by to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 Bmer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. CDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
men per one per one per oligonucleotide are grouped into clusters.
                                                                                                                                                                                                                                                                                                                                                                                                                                       EST 01-SEP-2004

CONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a parcedure, clones that display the same hybridisation matrix with a battery of 200 8mer oligonucleotides are grouped into clusters. One clone per ONFP cluster was selected for sequencing. cDNA clones and filters are distributed via Deutsches Ressourcenzentrum fuer

This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [128,636].

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 14, Sequence 12, Sequence 1, A Sequence 11, Sequence 11, Sequence 19, Sequ

Sequence 19, Application US/09807802A

Patent No. 6759237

GENERAL INFORMATION:
APPLICANT: Wilson, James M.
APPLICANT: Wilson, James M.
TITLE OF INVENTION: Adeno-Associated Virus Serctype I Nucleic Acid Sequences,
TITLE OF INVENTION: Vectors and Host Cells Containing Same
TITLE OF INVENTION: Vectors and Host Cells Containing Same
FILE REPERENCE: GAVPON.031USA
CURRENT FILING DATE: 1902-02-21
FRIOR APPLICATION NUMBER: US 60/107,114
PRIOR APPLICATION NUMBER: PCT/US99/25694
FRIOR APPLICATION NUMBER: PCT/US99/25694
FRIOR PILING DATE: 1999-11-02
NUMBER OF SEQ ID NOS: 20

SOFTWARE: Patentin version 3.1
